PS-1270  12 Volt 7.0 AH
Rechargeable Sealed Lead Acid Battery

Features
- Absorbent Glass Mat (AGM) technology for superior performance
- Valve regulated, spill proof construction allows safe operation in any position
- Power/volume ratio yielding unrivaled energy density
- Rugged impact resistant ABS case and cover (UL94-HB)
- U.L. recognized under file number MH 20845

Performanace Specifications

Nominal Voltage ....................................................... 12 volts (6 cells)
Nominal Capacity
20-hr. (350mA to 10.50 volts) ........................................... 7.00 AH
10-hr. (650mA to 10.50 volts) ......................................... 6.50 AH
5-hr. (1.2A to 10.20 volts) ............................................. 6.00 AH
1-hr. (4.5A to 9.00 volts) .............................................. 4.50 AH
15-min. (14A to 9.00 volts) .......................................... 3.50 AH
Approximate Weight ............................................... 4.80 lbs. (2.18 kg)
Energy Density (20-hr. rate) ............... 1.49 W-h/in³ (90.95 W-h/l)
Specific Energy (20-hr. rate) ............. 17.50 W-h/lb (38.58 W-h/kg)
Internal Resistance (approx.) ............. 23 milliohms
Max Discharge Current (7 Min.) ........... 21.0 amperes
Max Short-Duration Discharge Current (10 Sec.) .... 70.0 amperes
Shelf Life (% of nominal capacity at 68°F (20°C)
1 Month ...................................................................... 97%
3 Months .................................................................. 91%
6 Months ................................................................ 83%
Operating Temperature Range
Charge ................................................................. -4°F (-20°C) to 122°F (50°C)
Discharge ............................................................. -40°F (-40°C) to 140°F (60°C)
Case ......................................................... ABS Plastic
Power-Sonic Chargers........................................ PSC-12800A, 12800A-C

To ensure safe and efficient operation always refer to the latest edition of our Technical Manual, as published on our website. All data subject to change without notice.
**Charging**

**Cycle Applications:** Limit initial current to 2.1A. Charge until battery voltage (under charge) reaches 14.4 to 14.7 volts at 68°F (20°C). Hold at 14.4 to 14.7 volts until current drops to under 70mA. Battery is fully charged under these conditions, and charger should be disconnected or switched to “float” voltage.

“Float” or “Stand-By” Service: Hold battery across constant voltage source of 13.5 to 13.8 volts continuously. When held at this voltage, the battery will seek its own current level and maintain itself in a fully charged condition.

**Note:** Due to the self-discharge characteristics of this type of battery, it is imperative that they be charged within 6 months of storage, otherwise permanent loss of capacity might occur as a result of sulfation.

**Chargers**

Power-Sonic offers a wide range of chargers suitable for batteries up to 100AH. Please refer to the Charger Selection Guide in our specification sheets for “C-Series Switch Mode Chargers” and “Transformer Type A and F Series”. Please contact our Technical department for advice if you have difficulty in locating suitable models.

**Further Information**

Please refer to our website www.power-sonic.com for a complete range of useful downloads, such as product catalogs, material safety data sheets (MSDS), ISO certification, etc.
