**FLOAT LIFE IN YEARS VS. TEMPERATURE**

**GENERAL RELATION OF CAPACITY VS. STORAGE TIME**

**CHARGING**

**Cycle Applications:** Apply constant voltage charge at 14.4V – 15.0V at 25°C. Initial charging current should be set at less than 8.4 Amps. Switch to float charge to avoid overcharging.

**“Float” or “Stand-By” Service:** Apply constant voltage charge of 13.5V to 13.8V at 25°C. Initial charging current should be set at less than 8.4 Amps. When held at this voltage, the battery will seek its own current level and maintain itself in a fully charged condition.

**Temperature Compensation:** Charging Voltage for both Cyclic and Standby applications should be regulated in relation to ambient temperature. As temperature rises charging voltage should be reduced to prevent overcharge and increased as temperature falls to avoid undercharge.

For further charging information including temperature compensation factors, see Power Sonic Technical Manual/ Power Sonic Charger specifications.

**APPLICATIONS**

A whole range of CYCLIC applications including but not limited to:

- Fire and Security
- Telecommunications
- Emergency Lighting
- Utility
- Solar
- Wind
- UPS
