Security

Power Sonic's PSL-SH series has been specifically designed as a drop-in replacement to lead acid batteries. Combining proven lithium iron phosphate (LiFePO₄) technology with an intelligent protection circuit module (PCM), the PSL-SH series delivers more power, faster charging and a longer life at less than half the weight of the equivalent lead acid battery.

With high efficiency and ultra-fast charging and discharging the PSL-SH series is ideal for industrial applications where a long-life span and quick charging capabilities are needed.

At the heart of every Power Sonic lithium battery is an intelligent PCM that monitors and reacts to multiple voltage and current events to maximize performance, battery life and safety.
