

PS SERIES

RECHARGEABLE SEALED LEAD ACID BATTERIES

Fire & Security

General Purpose

Emergency Lighting

Medical

Power-Sonic's PS series of sealed lead acid batteries have been designed with AGM (Absorbent Glass Mat) technology to ensure superior performance and reliability.

The PS series has been explicitly engineered for general-purpose standby and light cyclic applications, including security and fire protection systems, emergency lighting, UPS, toys, and medical devices.

PS SERIES

Rechargeable Sealed Lead Acid Batteries

FEATURES

- General purpose VRLA battery
- Absorbent Glass Mat (AGM) technology for superior performance
- Power to volume ratio yielding unrivalled energy density
- VdS approved models
- Valve regulated, maintenance free spill proof construction
- Rugged impact resistant ABS case and cover
- Flame retardant to UL94:HB and UL94:V0
- Low self-discharge rate for long shelf life

Rechargeable Sealed Lead Acid Batteries VdS

A number of our PS range of batteries are VdS approved. VdS is one of the world's leading inspection and certification companies in the fire protection and security industry. They set international standards with the publication of a comprehensive set of rules and guidelines for fire protection and safety equipment. VdS is one of the only testing institutes certifying sealed lead acid batteries, our VdS approved batteries are indispensable for the reliability of many security and fire systems. The VdS quality seal certifies that our batteries are of optimum quality for use in fire, security, and life safety applications.

SPECIFICATIONS (VdS Approved)

Rechargeable Sealed Lead Acid Batteries
Flame Retardant

UL94:V0

UL94:V0 is a standard established by Underwriters Laboratories (UL), which is a globally recognized independent safety certification company. This standard is used to evaluate the flammability of plastic materials used in various products and components.

UL94:V0 is a fire-protection standard that evaluates the ability of a plastic material to self-extinguish after being exposed to a small flame. The V0 designation indicates that the material has passed the most stringent requirements for vertical flame testing. The test involves applying a small flame to a vertically mounted specimen of the material for a specified time, then removing the flame and monitoring the material for additional burning or dripping.

SPECIFICATIONS (UL94:V0-Fire Protection Approved)
